EVERY BABY HAS A STORY TO TELL

LET SCSA® DIAGNOSTICS BE PART OF YOUR BABY'S STORY

SCSA® Diagnostics is dedicated to helping "trying to conceive" (TTC) couples and their doctors find a clear, early answer to infertility problems through the innovative SCSA® test. Our test is a discreet, non-invasive and economical alternative that can be done in the privacy of your home.

Half of couple infertility is due to the male. Sperm DNA damage accounts for much of male factor infertility. Routine semen analysis does not detect sperm DNA damage.

TESTING 1, 2, 3

The SCSA® test measures broken DNA and abnormal proteins attached to DNA. Both of these factors are known to cause miscarriages and pregnancy failures.

"Babies are such a nice way to start people." Don Herrold

Who Should Have A Sperm DNA Fragmentation Screening?

All couples with unexplained infertility for more than a year

Couples with a history of spontaneous miscarriages

Couple considering IUI, IVF, ICSI

Men over 40 years of age

Men who are smokers

Men on certain prescription medicines

Men who have been treated for cancer

Men exposed to toxic agents

Men considering varicocele repair

Men under high stress

MALE INFERTILITY IS NOT UNUSUAL

About one in three men diagnosed with "unexplained infertility" have an abnormally high breakage of sperm DNA - the all-important half of an embryo's genetic makeup.

Early testing can spare their partners a great deal of unnecessary discomfort and expense.

today about having a
SCSA® test.**

WE CAN PARTNER WITH YOUR DOCTOR

A visit to your fertility specialist should start the evaluation for male infertility. The specialist will likely begin with a basic interview and exam that includes:

A full medical and reproductive history, along with any surgeries you've had and any medication you're taking.

A physical exam including a semen analysis.

Lifestyle questions including your exercise, smoking and drug use.

A frank discussion about your sexual life, including pregnancy successes or failures.

From there, your physician may order diagnostic tests to identify where the problems lie. SCSA® Diagnostics is the laboratory that many physicians choose to perform one of those tests: a sperm DNA fragmentation test.

ORDERING A TEST IS EASY!

To place an order, you can go online to our website and click on "order now." It's quick, easy and convenient.

A semen collection kit can be sent either to the patient's home or the doctor's office.

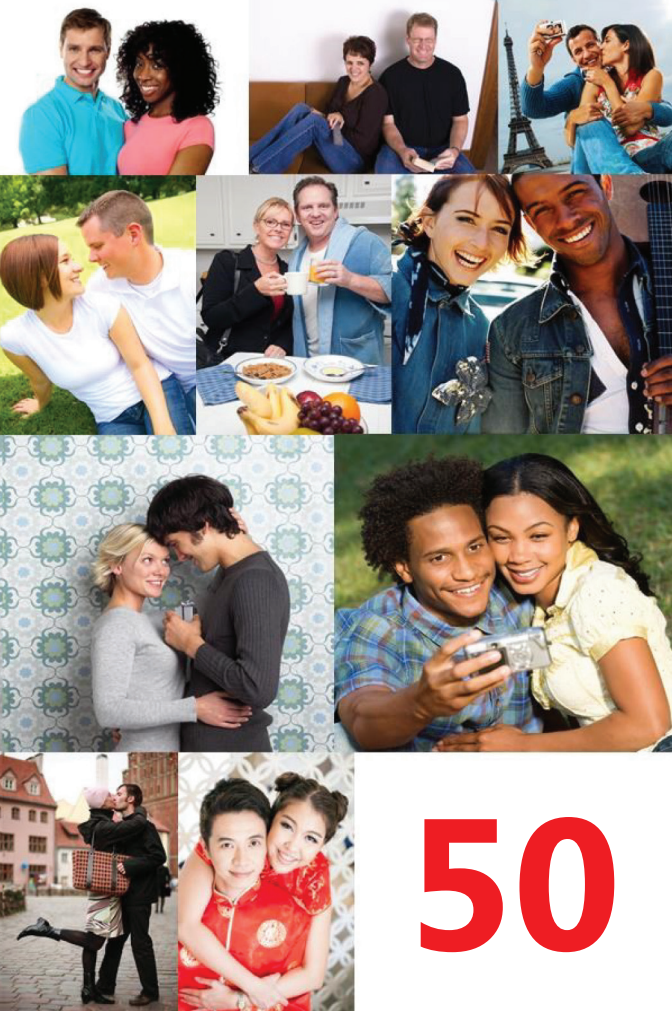

Collection supplies, directions and shipping instructions are included in each kit.

Once the sample is shipped, the results will be available within two days to a week. That's all there is to it.

The American Pregnancy Association states that male factor infertility is related to approximately **50%** of all couple infertility cases. By measuring a sperm sample, SCSA® Diagnostics can quickly identify the presence of damaged, immature and unhealthy sperm, a common cause behind unsuccessful pregnancies.

The answers to infertility aren't always obvious. Most infertile men will not have any symptoms. Even when the classic semen analysis of sperm count, motility and morphology are in normal range, the sperm may still have broken DNA that cannot sustain normal embryo growth.

Male factor infertility, in most men, will continue unless treated. A step in the right direction toward treatment, is to obtain the correct diagnosis. A SCSA® test can be a big part of the correct diagnosis.

If you are seeking quality and assurance of excellence, with cutting edge technology and unsurpassed clinical results, SCSA® Diagnostics is the laboratory you'll want to choose.

SCSA® A STEP IN THE RIGHT DIRECTION

COMMON CAUSES OF DNA FRAGMENTATION

DNA Fragmentation can be attributed to various conditions including:

INFECTION

AGE

AIR POLLUTION

SMOKING

HEAT

FEVER

DRUG USE

PESTICIDES

CHEMICALS

CANCER & OTHER DISEASES

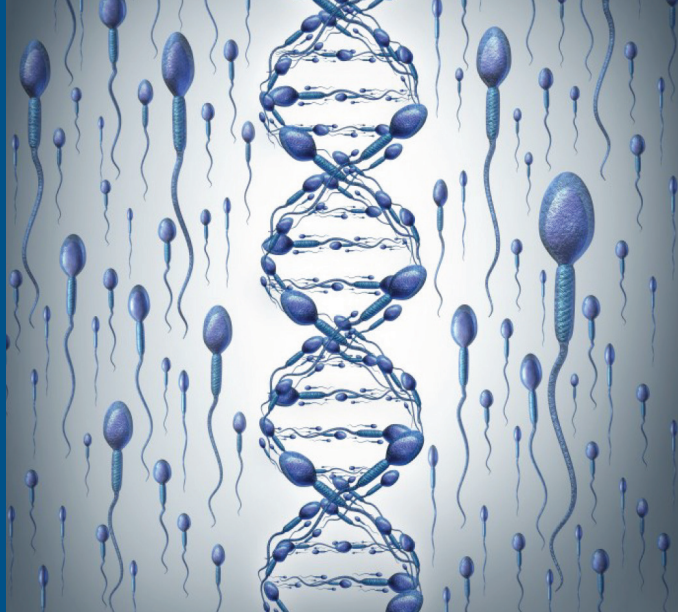

RADIATION X-RAYS

HIGH STRESS

PRESCRIPTION MEDICINES

OBESITY

Reduction or removal of the possible contributor may reduce the elevated DNA fragmentation levels.

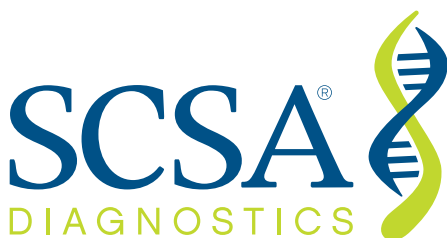

START WITH THE SPERM, END WITH THE ANSWER

The SCSA® test is the original sperm DNA fragmentation test used by thousands of patients all over the world.

Our test results provide answers that can help men make changes that may improve sperm health.

Our laboratory is federally accredited and certified. Only this laboratory can be trusted to provide accurate and time-tested results.
